

Taubman College Call for Collaborators

Taubman College is seeking interested and forward-thinking architectural practices to collaboratively explore new research trajectories in digital fabrication and robotics. We offer a world class FABLAB facility, leading edge faculty and highly motivated and engaged students. Our goal is to leverage these tools and associated knowledge to bridge academic with practice and industry interests from the region. The research group will develop an integrative course that will address emerging questions from practice and better prepare students to operate in a rich and complex professional environment.

Interested professionals should contact Karl Daubmann, AIA (kmdaub@umich.edu) for more information and to be informed of upcoming meetings to discuss the development of this group.
